SUMMARY

Senior software engineer with 10+ years across Python, TypeScript, and SQL. I design frameworks other developers build on — three of them in Python's desktop ecosystem, including ttkbootstrap (4.2M downloads, 2.6k stars, five years of continuous maintenance). At LogistiVIEW I identify platform gaps, propose solutions, and build them, architecting shared capabilities with the configurability that reduces work for every team downstream. The recurring problem across all of it is API design: plenty of interfaces work correctly, and I care that they are also organized, discoverable, and pleasant to read. Most useful where the right answer isn't obvious yet and someone has to weigh tradeoffs across the whole system before committing.

EXPERIENCE

LogistiVIEW

Charlotte, NC

Senior Software Engineer

Nov 2024 – present

Identify platform gaps, propose solutions, and implement them — working directly with leadership to shape what gets built. Primarily Angular and TypeScript.

- Re-architected core Task Management to support batch-driven operating models for a Fortune 100 retail enterprise, then built the high-throughput operational workflows that run on it.
- Delivered and modernized shared platform capabilities — Workflow Builder, Dataset Builder, Parameter Guidance, Knowledge Base, and Logging & Monitoring — designing each for configurability so implementation teams can adapt them without pulling in engineering.
- Defined the platform's approach to configurable web forms and drove adoption of DevExtreme components, improving UI consistency and giving implementers a faster path to building complex workflows.

Platform Architect

Oct 2021 – Nov 2024

- Introduced configurable web form templates that gave implementation teams reusable patterns and materially shortened delivery timelines; the approach became a core part of how implementations are built on the platform.
- Led implementation of high-volume operational workflows for a Fortune 100 retail enterprise, and supported additional large-scale customers including a Fortune 100 industrial distributor.
- Formalized platform documentation and training, improving onboarding speed and consistency across concurrent implementation efforts.
- Served as the link between implementation teams, platform engineering, and product management, bringing an implementer's perspective into roadmap and feature design decisions.

Grant Thornton

Charlotte, NC

Manager, Enterprise Reporting & Analytics

Aug 2016 – Oct 2021

- Delivered enterprise reporting, analytics, and applied data solutions for internal stakeholders — predictive modeling, sentiment analysis, process automation, and intelligence gathering through document and web-based data extraction.
- Owned projects end to end through requirements discovery, solution design, implementation, and knowledge transfer; set documentation, code review, and technical standards, and trained both technical and non-technical users.

Senior Financial Analyst

Mar 2014 – Jul 2016

- Supported national and regional leadership with operational and financial analysis, reporting, and forecasting; key contributor to the annual budgeting, forecasting, and reserve processes, and mentored analysts firm-wide.

Senior Financial Analyst / Financial Analyst

Jul 2011 – Mar 2014

- Lead analyst for a \$1B division: built the financial outlook and annual budget, developed campaign pricing models, and created exception reporting that improved visibility into operational and financial drivers.
- Partnered with IT, Finance, and Accounting on initiatives to automate corporate finance and accounting functions, improving efficiency, accuracy, and scalability.

OPEN SOURCE

ttkbootstrap

ttkbootstrap.org

Creator & maintainer — 4.2M downloads, ~145k/month, 2.6k stars

2021 – Present

A theming and design-system layer for Python's tkinter. Thirty curated light and dark themes generated on demand at runtime, a single `bootstyle` keyword that styles any widget by intent rather than by hand-tuned colors, built-in font-rendered icons, and a declarative `Theme()` API for custom design systems. Pure Python, one dependency.

bootstack

bootstack.org

Creator & maintainer

2026 – Present

A Python desktop application framework built on Tk. Declarative context-manager layout where the code hierarchy is the UI hierarchy, 60+ widgets from primitives through `DataTable`, `Tree`, `Calendar` and a full `CodeEditor`, reactive signals for state that flows between widgets, an event stream API with composable filtering, debounce and throttle, hot reload that keeps your place across saves, and a CLI that scaffolds, runs, and packages to a standalone executable.

tkinter-icons

tkinter-icons.readthedocs.io

Creator & maintainer

2025 – Present

A font-based icon system for tkinter: 61,000+ icons across sixteen families — Material, Font Awesome, Lucide, Bootstrap, Simple Icons and others — behind one uniform API, packaged as eighteen distributions that install as extras so the distribution names never surface. No image assets to manage.

SELECTED PROJECTS

Mediq

github.com/israel-dryer/mediq

PostgreSQL (PL/pgSQL), Python, Docker

The scheduling core of a medical practice, built as a Postgres project. Provider time — appointments, holds, time off, admin blocks — is one table carrying a gist exclusion constraint over (`provider_id`, `tstzrange`), so two overlapping live claims cannot both exist and double-booking is structurally impossible rather than merely unlikely. Cancellation is a release rather than a delete, and an ASAP waitlist fills the freed slot with holds that lapse on their own.

Also **Catan Dice** (Angular, Ionic, Firebase, Dexie) at catandice.tallypad.net and **Adventures In Faith** (React 18, Chakra) at books.klepel.org — both installable PWAs with offline-capable local persistence.

TECHNOLOGY & SKILLS

Languages	Python · TypeScript · JavaScript · SQL · C# · Groovy
Frameworks	Angular · React · Ionic · Tk/tkinter
Data	PostgreSQL · PL/pgSQL · Data modeling · Reporting & analytics
Tools	Docker · Git · Linux · Firebase
Practices	API & framework design · Systems design · Full-stack delivery

EDUCATION & CERTIFICATIONS

M.S. Accounting	Lynchburg, VA — 2010
B.S. Interdisciplinary Studies	Minneapolis, MN — 2006
CPA License #12612	Kentucky — 2013 — 2017
Adjunct Faculty, Indiana Wesleyan University <i>Accounting</i>	Louisville, KY — 2011 — 2016
